ahaqiq@gmail.com

In a context of E-Governance of higher education, university has known very changes and modifications on her missions, roles and objectives. In the other hand, the new technologies impose the use and the application of its tools and solutions in all areas and organizations to proof their development and modernization.

The higher education as all other fields, is called after many reforms, to improve its structures and push its to apply all Information Technologies on the objective to develop a new modern systems of management. We can talk about university development if just we can have an efficient solution for management axed on the exploitation of technologies device.

This special session will provide an opportunity for researchers who are actively involved in the university governance processing to expose their works and projects in the area; so they can make suggestions or solution about the integration of the Information technologies for the improvement of the university governance.
